

Fass API

Fass API – access updated and quality-assured medicine information in your system or on your website.

What is an API?

An API (Application Programming Interface) is an interface that allows different software programs to communicate with each other. It defines the methods and data formats that applications can use to request and exchange information.

Do your employees or customers need information on medicinal products?

We have now made it even easier to obtain the information you need using Fass API. Fass provides access to aggregated information on medicinal products from authorities and Fass member companies. Fass contains basic information on all approved medicines in Sweden.

What does Fass API offer?

Fass API is a REST API that simplifies the process of integrating information on medicinal products. It has been designed with a focus on performance and offers a very high level of availability. Fass API has undergone multiple vulnerability tests to ensure that it is and remains safe to use.

The information in Fass is updated regularly. Basic information on medicinal products is updated every 30 minutes. Via Fass API you can easily update the information that has changed since the last data retrieval.

Fass API is continuously developed. By using Fass API, your business or organisation can quickly access new types of information on medicinal products.

” *It should be easy to retrieve and display up-to-date and quality-assured pharmaceuticals information. Fass is the platform containing the information that healthcare professionals and patients need to implement drug therapy.* ”

Facts about Fass:

- The Fass database contains information on 20 000 pharmaceuticals and 4 500 substances
- Fass is used daily in health care, in pharmacies and by patients and relatives
- Fass has over 4 million visits every month
- More than 220 companies, all of which contribute to the content of Fass, participate in the Fass collaboration. Participating companies manufacture about 95 percent of all pharmaceuticals sold in Sweden
- Basic Fass information is updated once every half hour (via LiIV – a system in which information from suppliers about pharmaceuticals is aggregated – from the Swedish eHealth Agency)
- Fass is an NMI – National Medical Information System.
- This means that Fass meets the requirements of the Swedish Medical Products Agency's regulations on NMIs (National Medical Information Systems)
